

30. attic: the roof is well constructed from full dimension lumber. 1x6 struts connect the rafters to the mid level cross ties

31. attic: the cross ties show in the upper part of the photograph, the ceiling rafters are below. The space between the rafters is filled with wood chips as insulation. The boards lying on the rafters are through bolted to the pipe hangers which extend through the ceiling below (see photos 35 and 36) The chimney flue is in its original location.
